Figure 88. A, B: *Protoachlya benekei*. A. Lateral oogonium and monoclinous antheridial branch; oospore centric; stalk characteristically expanded immediately below oogonium. B. Immature oogonium; antheridial cells attached laterally or apically to oogonial wall. C-F: *Protoachlya paradoxa*. C, D. Configurations of oogonia and antheridial branches. E, F. Oogonia with subcentric oospores; antheridial cells
bulbous, attached laterally or apically; fertilization tubes persistent. (Figs. C, D, scale b; others scale a.)
